UI	User Interface
UML	Unified Modeling Language
ERD	Entity-Relationship Diagram
SMS	Short Message Service
H/M/L	High/Medium/Low
Admin	Administrator

Glossary

Term	Simple Definition
UniMate	A peer tutoring platform that connects university students with tutors.
Tutoring Request	A request created by a student to book a tutoring session
Confirmed session	A tutoring session that has been accepted and scheduled
Tutor Eligibility	Confirmation that a tutor is allowed to tutor a specific subject.
Policy Exceptions	Special approval from the Coordinator when a booking rule cannot be followed.
Mock Notification	A simulated notification about requests, decisions, or cancellations.
Mock Reminder	A simulated reminder before an upcoming tutoring session.
Booking Conflict	A case where two tutoring sessions overlap.

1. Document Control

1.1 Version history

Version	Date	Author	Change summary	Approval
0.1	5-10-2026	Hoor	Initial draft of cover page , Purpose, product vision, Scope, Assumptions and dependencies, Constraints	[Pending]
0.2	7-10-2026	Nourah	Added Stakeholders summary, Overview, and Functional Requirements	[Pending]
0.4	10-10-2026	Hoor	Added Use Case model and UC-01	[Pending]
0.5	10-10-2026	Ghalya	Added Non-functional Requirements, Domain Overview, Domain Model, Data Retention, Deletion and Auditability.	[Pending]
0.6	11-10-2026	Nourah	Added UC-02 and UC-03	[Pending]
0.7	12-10-2026	Ghalya	Added UI Prototype for UC-01 and usability evaluation.	[Pending]
1.0	16-10-2026	Team	Review completed, added appendix, glossary and list of abbreviations	[Approved by team]
2.0	24-10-2026	Hoor - Nourah	and Reviewed the TA's feedback and updated the vision, scope, use cases, and version	[Approved by team]

			history accordingly and added UC-03 prototype.	
2.1	28-10-2026	Hoor	Updated NFR's and added verification methods and updated the use case diagram based on the TA's feedback	[Pending]
2.2	30-10-2026	Ghalya	Revised Section 5 based on the TA's feedback. Updated the Domain Overview, redesigned the Domain Model (ERD)	[Pending]
2.3	30-10-2026	Nourah	Update the Gantt Chart , corrected dependencies and fixed the duplicated figure3	[Pending]
3.0	31-10-2026	Team	Final review complete	[Approved by team]

1.2 Credits

Name	**Role/Task**
Hoor Alameer	List of Abbreviations, Glossary, Purpose, product vision, Scope, Assumptions and dependencies, Constraints ,Use Case model, Use Case UC-01, UC-03 Prototype.
Nourah Alaqeel	Stakeholder summary, Overview, Functional Requirements, Use Case UC-02 and UC-03
Ghalya Alzaid	Non-functional Requirements, Domain Overview, Domain Model, Data Retention, Deletion and Auditability, UI Prototype and Usability Evaluation

2. Introduction

2.1 Purpose

The purpose of this Software Requirements Specification (SRS) is to describe the requirements of the UniMate system. UniMate is a peer tutoring and study session platform designed for university students. This document explains the system features, users, rules, constraints, and expected behavior. It can be used to guide the design, implementation and testing of the system.

2.2 Product vision

UniMate is a peer tutoring and study session platform designed for university students who struggle to find qualified tutors that match their subjects and availability, UniMate provides a simple and organized platform to search for suitable tutors and request tutoring sessions. Unlike informal tutoring arrangements, university group chats, and general tutoring websites, where finding reliable tutors and coordinators can be difficult, UniMate brings tutor searching, verification, availability management, and session requests together in one platform. It also allows coordinators to verify tutors and monitor the tutoring process, creating a more organized and reliable tutoring experience.

2.3 Scope

In Scope:

- User Login and Account Creation: The system shall allow students and tutors to create accounts and allow students, tutors, and coordinators to log in securely according to their roles.
- Tutor search: Students can search for available tutors based on subject, date, time, and session format.
- Tutoring request: Students can create tutoring session requests by selecting a tutor and providing the required session details.
- Request Management: Tutors can view tutoring requests and either accept or decline them.
- Session Management: The system allows students to reschedule or cancel confirmed tutoring sessions according to the booking rules.
- Session Completion and Rating: Tutors can record a session as completed, after that the student can provide a rating or feedback.
- Tutor Availability: The system allows tutors to publish the subjects they can teach and their available dates and times.
- Tutor Verification: The coordinator can verify that a tutor is eligible to tutor a subject before the tutor accepts any requests for it.
- Coordinator Functions: The system allows the Coordinator/Admin to approve policy exceptions and monitor system activities.
- Booking Rules: The system checks tutoring hour limits, booking notice requirements, session duration, scheduling conflicts, and cancellation timing.
- Mock Notifications: The system displays simulated notifications when tutoring requests are created, accepted, declined, or cancelled.
- Mock Reminders: The system provides simulated reminders 24 hours and 1 hour before the confirmed tutoring sessions.

Out of scope / non-goals:

- Other Extensions: Any feature other the teams assigned Mock Notifications and Reminders extension will not be in scope.
- Group Sessions: Group tutoring sessions with multiple students
- Waitlist: Waitlist and automatic tutor searching.
- Analytics: Advanced reports and dashboards.

2.4 Assumptions and dependencies

- Assumption: Students, tutors, and coordinators using the system are university users.
- Assumption: Tutors provide correct subjects and availability.
- Assumption: Students and tutors are responsible for updating the system if a session is cancelled or rescheduled.
- Assumption: Users will only perform actions that are appropriate for their role.
- Assumption: Users have valid contact information that is needed for the mock notification and reminder feature.
- Assumption: A confirmed session has a valid date, start time, duration, and assigned tutor.

- Dependency: The system depends on stored session information for mock reminders.
- Dependency: The system depends on stored tutor verification status before allowing a tutor to accept a request.
- Dependency: The system depends on stored tutor availability to check booking conflicts.
- The mock notification feature depends on valid user contact information and preferences.

2.5 Constraints

- A student cant book more than five tutoring hours within a 7 day period without the coordinators approval.
- A tutoring request must be submitted at least 2 hours before the session start time.
- A tutoring session must last between 30 and 120 minutes.
- A session should be cancelled at least 4 hours before it starts to be considered on time.
- A tutor must be verified for the requested subject before accepting a tutoring session.
- The system must follow the projects required data model and UML design.
- The system must support the required user roles: Student, Tutor, Coordinator/Admin
- The system must support both online and in-person tutoring sessions.
- The system must keep requires session, rating, and audit information.
- The system must use the instructors testing setup and data when provided.
- The team must document the testing setup used when none is provided.
- The system must record important actions for later view.

2.6 Stakeholder summary

Role	**Primary goals**	**Key needs / pain points**	**Priority (H/M/L)**
Student	Search for tutors by subject, date and time,	Find qualified tutors with	H

	Request and book tutoring sessions and Reschedule or cancel sessions	suitable availability and avoid scheduling problems	
Tutor	Publish subjects and availability, Receive tutoring requests, Accept or decline requests and Record session completion	Manage requests efficiently, maintain accurate availability, and avoid overlapping sessions	H
Coordinator/Admin	Verify tutor eligibility, Handle policy exceptions and Monitor system activity	Ensure tutors meet eligibility requirements and that tutoring policies are followed	H

2.7 Overview

This SRS document is divided into different sections. Sections 1 and 2 provide the document details and introduction to the project. The remaining sections are organized as follow: Section 3 explains the functional requirements and use-case model of UniMate. Section 4 describes the non-functional requirements. Section 5 describes the systems domain concepts, data and its relationships and recorded system activity. Section 6 shows the UI prototype and usability testing. Section 7 includes the references and project management information.

3. Functional Requirements and Use-case Model

3.1 Functional requirements

The following functional requirements describe the main functions of the UniMate system. They explain what students, tutors and coordinators can do when using the system

FR-01: User Authentication and Access Control

FR-01.1 Create Account: The system shall allow new users to create an account.

FR-01.2 Login: The system shall allow registered users to log in using valid credentials and temporarily lock the account for 15 minutes after 5 consecutive failed login attempts.

FR-02: Tutor Search

FR-02.1 Search for Tutors: The system shall allow students to search for tutors based on the subject they need.

FR-02.2 Check Availability: The system shall allow students to search for tutors based on available dates.
FR-02.3 View Session Format: The system shall allow students to search for online or in-person tutoring sessions.

FR-03: Tutoring Requests

FR-03.1 Create Tutoring Request: The system shall allow students to create a tutoring request including the subject, topic, time, reason, and preferred tutor.
FR-03.2 View Requests: The system shall allow tutors to view the tutoring requests sent by students.
FR-03.3 Accept or Decline Requests: The system shall allow tutors to accept or decline tutoring requests.

FR-04: Session Management FR-04.1 Reschedule Session : The system shall allow students to request a change to their tutoring session date or time.
FR-04.2 Cancel Session : The system shall allow students to cancel confirmed tutoring sessions. Cancellations made at least 4 hours before the session start time shall be recorded as on-time cancellations, while cancellations made less than 4 hours before the start time shall be recorded as late cancellations.
FR-04.3 Record Session completion: The system shall allow tutors to mark a tutoring session as completed.
FR-04.4 Rate Session: The system shall allow users to rate a session only after it is completed

FR-05: Tutor Verification

FR-05.1 Verify Tutor Eligibility: The system shall allow the coordinator to verify a tutor's eligibility to teach a specific subject.
FR-05.2 Restrict Unverified Tutors: The system shall prevent tutors from accepting requests for subjects they have not been verified to teach.

FR-06: Tutor Availability

FR-06.1 Publish subjects: The system shall allow tutors to add the subjects they can tutor.
FR-06.2 Publish Availability: The system shall allow tutors to add their available dates and times.

FR-07: Booking Rules

FR-07.1 Check booking conflicts: The system shall prevent tutors from having overlapped confirmed sessions.
FR-07.2 Check weekly hour limit: The system shall prevent a student from booking more than 5 tutoring hours within any rolling 7day period unless the Coordinator approves a policy exception.
FR-07.3 Check booking time: The system shall ensure that a tutoring request is submitted at least 2 hours before the session.
FR-07.4 Check session duration: The system shall ensure that a tutoring session lasts between 30 and 120 minutes.

FR-08: Coordinator Functions

FR-08.1 Handle policy exceptions: The system shall allow the coordinator to approve policy exceptions.
FR-08.2 Review system activity: The system shall allow the coordinator to review system activity.

FR-09: Mock Notifications and Reminders

FR-09.1 Reminders: The system shall create mock reminders 24 hours and 1 hour before a tutoring session.

FR-09.2 Notifications: The system shall create mock notifications for tutoring requests, decisions, and cancellations.

3.2 Use Case Model

The Use Case Diagram shows the main actors of the UniMate system and how they interact with its main functions. The actors are the Student, Tutor, and Coordinator/Admin. It also shows the relationships between the main use cases such as searching and requesting a session, reviewing, and deciding on requests, completing and rating settings, and handling system rules and notifications.

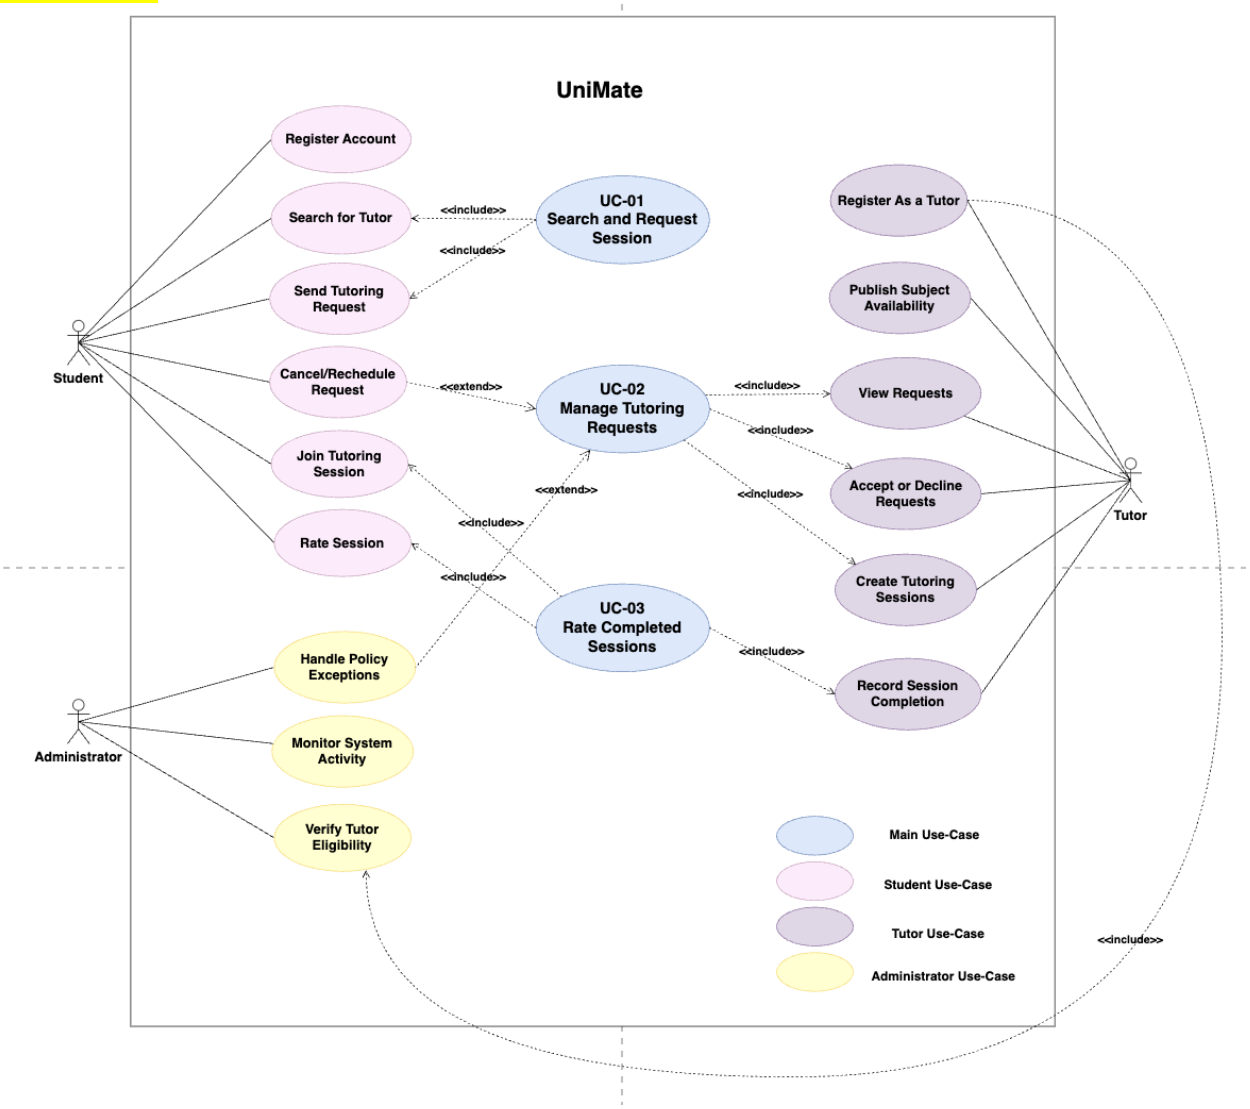

Figure 1 Use Case Diagram

Supporting Use Cases: Register Account, Register As a Tutor, Publish Subject Availability, Verify Tutor Eligibility, and Monitor System Activity are supporting use cases that represent

independent goals performed by the Student, Tutor, and Administrator. They support the overall functionality of UniMate but do not need to be directly connected to UC-01, UC-02, or UC-03.

Use case UC- 01: Search and Request Session

Related Requirements	FR-02.1, FR-02.2, FR-02.3, FR-03.1, FR-07.1, FR-07.2, FR-07.3, FR-07.4
Description (Goal)	The Student Searches for a suitable tutor and creates a tutoring request
Primary Actor(s)	Student
Secondary Actor(s)	Tutor, Coordinator/Admin
Preconditions	Tutor subjects and availability are stored in the system
Post-conditions	A tutoring request is created and sent to the tutor
Related use cases	Review and decide
Basic Flow	1. The student searches for tutors by subject, time, and session format. 2. The system displays available tutors. 3. The student selects a suitable tutor. 4. The student provides the session details and submits a tutoring request. 5. The system checks the booking rules. 6. The system creates the tutoring request.
Alternative Flow	If no tutors are available for the selected subject, date, time, or session format, the system shall display a message informing the student that no matching tutors were found. If the selected tutor is unavailable at the requested time, the system shall prevent the student from submitting the request and display an appropriate message. If the student exceeds the weekly tutoring hour limit, the system shall prevent the request unless a policy exception is approved by the Coordinator. If the requested session duration is less than 30 minutes or greater than 120 minutes, the system shall reject the request and display the allowed duration range. If the request is submitted less than 2 hours before the session

	start time, the system shall reject the request and inform the student of the booking notice requirement.

Use Case UC-02: Manage Tutoring Requests

Related Requirements	FR-03.2, FR-03.3, FR-05.1, FR-05.2, FR-09.2
Description (Goal)	The tutor reviews tutoring requests and accepts or declines them.
Primary Actor(s)	Tutor
Secondary Actor(s)	Student
Preconditions	A tutoring request has been submitted by a student.
Post-conditions	The tutoring request status is updated according to the tutor's decision.
Related use cases	Search and Request; Send Notifications and Reminders
Basic Flow	1. The tutor views the submitted requests. 2. The tutor selects a request. 3. The system displays the request details. 4. The tutor accepts or declines the request.
Alternative Flow	If the tutor has no pending requests, the system shall display a message indicating that no requests are available. If the tutor attempts to accept a request for a subject they are not verified to teach, the system shall prevent the action and display an error message. If the request has already been accepted, declined, or cancelled, the system shall prevent the tutor from processing it again. If the system fails to update the request status, it shall display an error message and retain the previous request status. .

Use Case UC-03: Rate Completed Sessions

Related Requirements	FR-04.3, FR-04.4, FR-08.2
Description (Goal)	The tutor records the session as completed, and the student rates the completed session.
Primary Actor(s)	Student, Tutor
Secondary Actor(s)	Coordinator/Admin
Preconditions	A tutoring session has been confirmed in the system.
Post-conditions	The session is marked as completed, and the student's rating is recorded.
Related use cases	Rate Session,Record Session Completion and Monitor System Activity.
Basic Flow	1. The tutor opens the confirmed tutoring session. 2. The system displays the session details. 3. The tutor marks the session as completed. 4. The system updates the session status. 5. The student opens the completed session. 6. The student submits a rating. 7. The system saves the rating and confirms the submission.
Alternative Flow	If the tutor attempts to mark a session as completed before its scheduled end time, the system shall prevent the action unless the session completion policy allows it. If the student attempts to submit a rating before the session is marked as completed, the system shall prevent the submission and display a message. If the student has already submitted a rating for the session, the system shall prevent duplicate ratings. If the rating cannot be saved, the system shall display an error message and allow the student to retry.

4. Non-functional Requirements

Each non-functional requirement describes a measurable quality or constraint of the UniMate system and includes a method for verification.

NFR-01: Performance

1.1 Tutor Search Response Time: The system shall display tutor search results within 2 seconds for at least 95% of requests under normal operating conditions.

Verification: Test several tutor searches, record their times, and check how many finish within 2 seconds.

1.2 Booking Response Time: The system shall display the result of submitting a tutoring request within 3 seconds for at least 95% of requests under normal operating conditions.

Verification: Submit multiple tutoring requests and measure the time taken for the system to display the resulting status.

NFR-02: Reliability and Data integrity

2.1 Session Record Updates: The system shall update tutoring session information within 2 seconds after a session is accepted, rescheduled, or cancelled.

Verification: Accept, reschedule, and cancel session, then check that the information updates within 2 seconds.

2.2 Data Recovery: The system shall restore access to tutoring requests and session records within 5 minutes after a system failure.

Verification: Simulate a system failure, restart the system, and check that users can access their previous tutoring requests and session records within 5 minutes.

NFR-03: Privacy and Data Protection

3.1 User Data Privacy: The system shall prevent unauthorized users from accessing personal information, with 100% of unauthorized access attempts blocked.

Verification: Test using students, tutors, and coordinator accounts and confirm that all unauthorized attempts are blocked.

3.2 Activity Records: The system shall record important activities, including tutoring request decisions, session cancellations, tutor verification, and coordinator approvals, with the user and time of each activity.

Verification: Perform these activities and check that the system records the correct user and time.

NFR-04: Usability

4.1 Tutor Search and Usability: The system shall allow at least 85% of first-time students to find a tutor and submit a tutoring request within 5 minutes without assistance.

Verification: Ask first-time students to complete the task and check whether at least 85% finish within 5 minutes.

4.2 Request Status Display: The system shall display the status of every tutoring request as pending, accepted, or declined.

Verification: Check requests with each status and confirm that the correct status appears on the screen.

NFR-05: Security and Access Control

5.1 Role Permissions: The system shall restrict access to 100% of features that users are not authorized to access based on their roles.

Verification: Test restricted features using all three roles and check that unauthorized access is denied.

5.2 Tutor Subject Verification: The system shall display only verified tutors in search results, with 100% of unverified tutors excluded.

Verification: Search for tutors using different subjects and check that no unverified tutors appear in the results.

NFR-06: Maintainability

6.1 System Organization: The system shall organize tutor search, tutoring requests, session management, and tutor verification into separate modules to make future changes easier.

Verification: Review the system design and check that these functions are organized into separate modules.

6.2 Booking Policy Updates: The system shall update booking policy values within 1 minute.

Verification: Change a booking policy value and check that the new value is applied within 1 minute.

NFR-07: Notification and Reminder Reliability

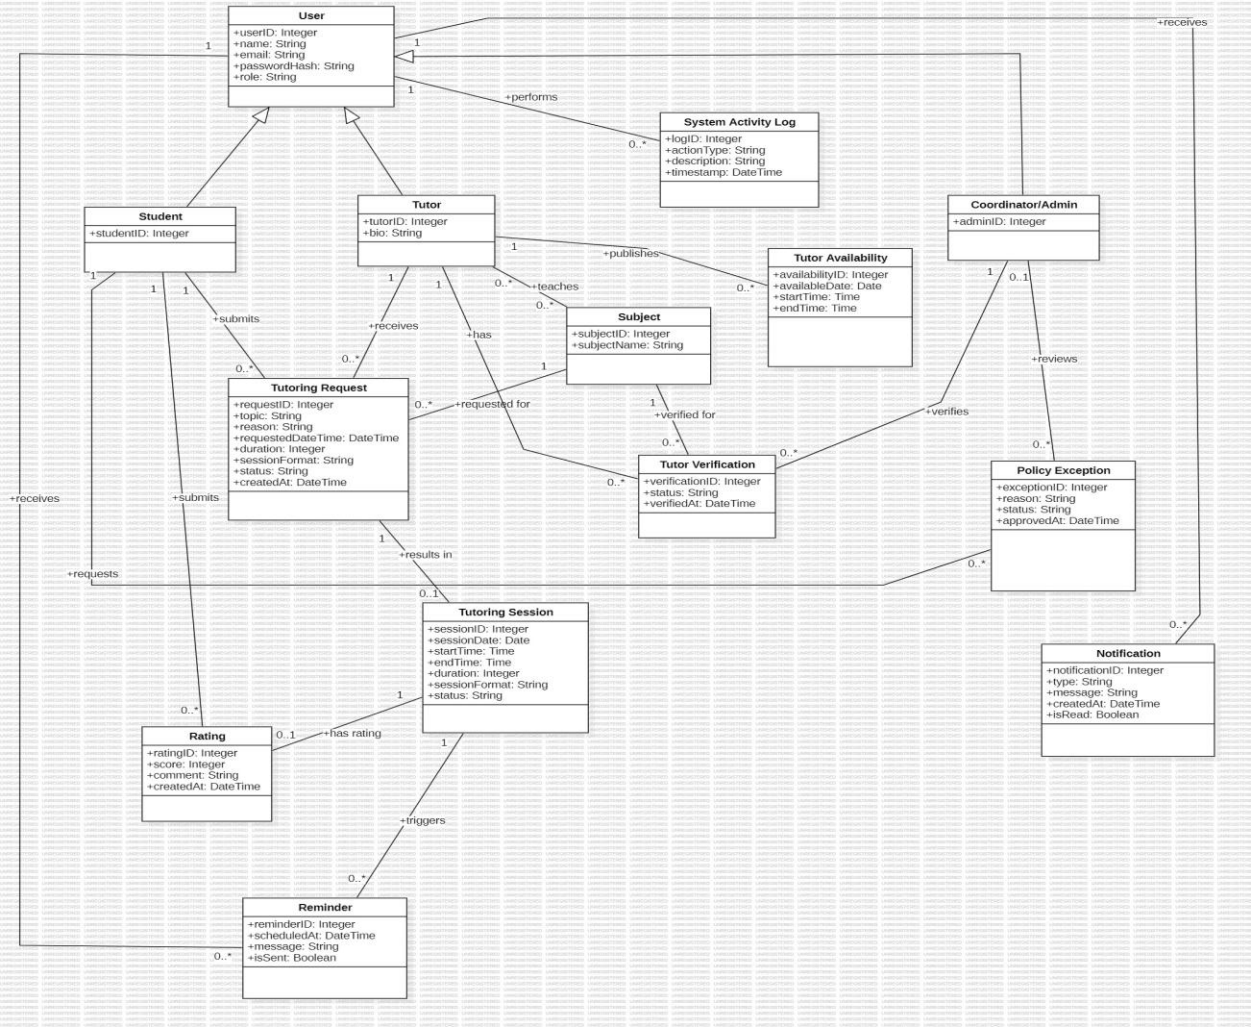

7.1 Notification Reliability: The system shall display all scheduled mock notifications and reminders at their specified times without missing any.

Verification: Create several tutoring requests and confirmed sessions, then check that all expected notifications and reminders are displayed at the correct times.

5. Domain overview

The UniMate system focuses on managing the tutoring process between university students and tutors. Users can create accounts and log in according to their roles. Students can search for tutors based on subject, available dates and times, and session format (online or in-person), then submit tutoring requests. Tutors can publish the subjects they teach and their available dates and times, view tutoring requests, and accept or decline them. The system checks booking rules, including scheduling conflicts, tutoring hour limits, booking notice requirements, and session duration. Students can request to reschedule or cancel confirmed sessions according to the booking rules. Tutors can mark sessions as completed, after which students can provide ratings and feedback. The Coordinator/Admin verifies tutor eligibility for specific subjects, approves policy exceptions, and monitors system activities. The system also provides mock notifications for tutoring requests, decisions, and cancellations, as well as mock reminders 24 hours and 1 hour before confirmed sessions. Important activities are recorded to support system monitoring and tracking.

5.2 Entity-relationship diagram (ERD) / domain model

5.3 Data retention, deletion, and auditability

- **Retention:** The system shall retain tutoring requests, session records, and ratings for at least 1 year for tracking and reporting purposes.
- **Deletion:** The system shall delete or anonymize inactive user accounts and personal information within 30 days after an approved deletion request, except for records that must be retained.
- **Audit:** The system shall record important activities, including user logins, tutoring request decisions, session cancellations, tutor verification, and coordinator approvals, along with the responsible user and timestamp. Audit records shall be retained for 1 year for system monitoring and tracking purposes.

6. UI Prototype and Usability Evaluation

The goal of this prototype is to demonstrate the main functions of the UniMate system and collect user feedback. The prototype covers three main use cases: searching for a tutor and submitting a tutoring request (UC-01), managing tutoring requests (UC-02), and rating completed tutoring sessions (UC-03). The prototype is evaluated to identify usability issues and improve the system design.

6.2 Key screens and states

- Login Screen

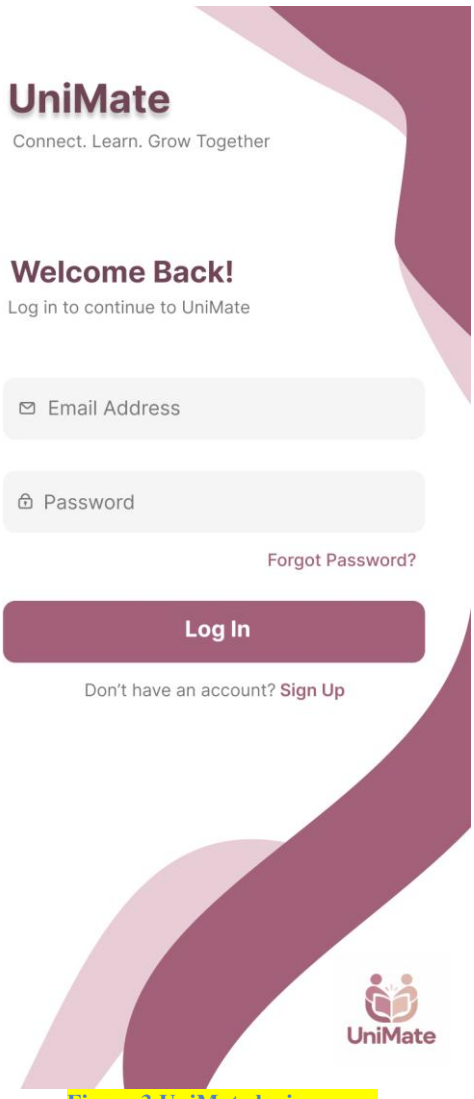

Figure 3 UniMate login screen

Description: Allows registered users to login to UniMate.

- Search Tutors Screen

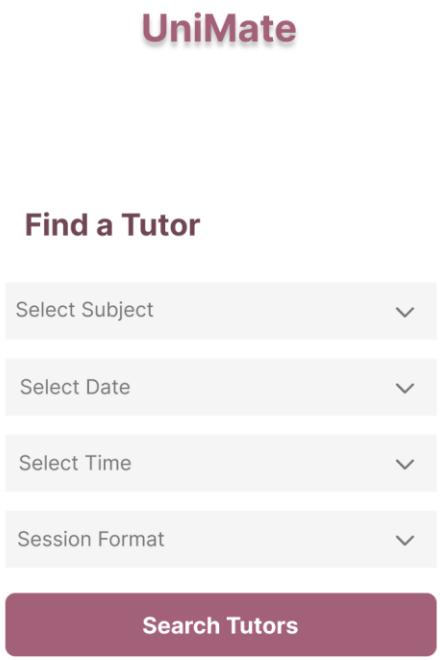

Figure 4 Find a tutor screen

Description: Allows students to search for tutors by subject, date, time, and session format.

- Available Tutors Screen

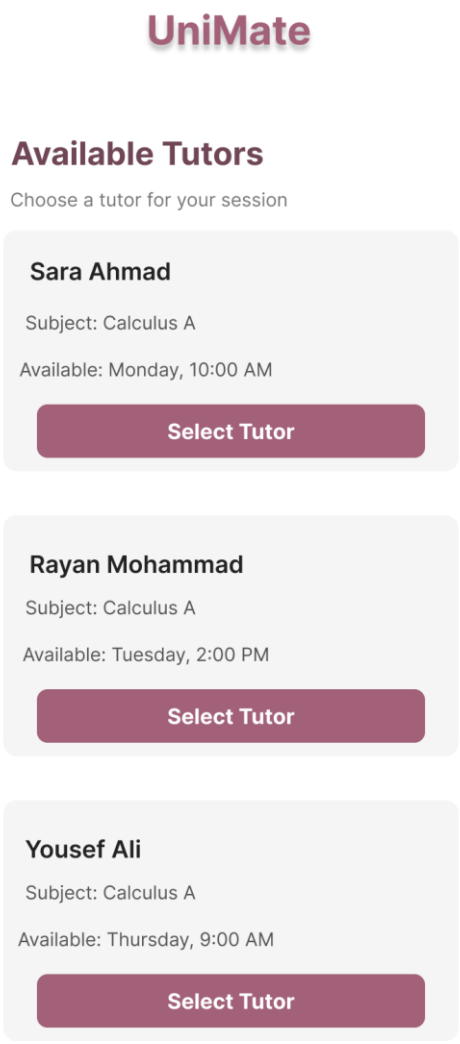

Figure 5 Available Tutors Screen

Description: Displays matching tutors and their availability so students can select a tutor.

- Tutoring Request Screen

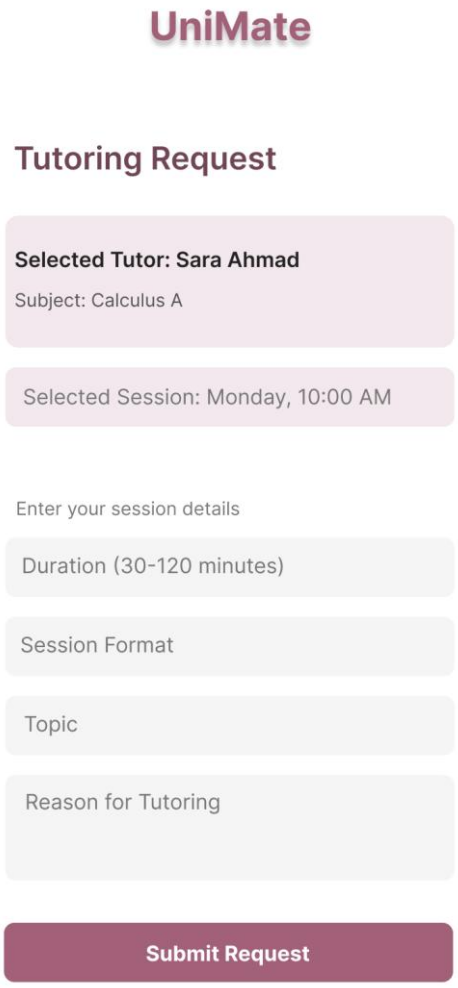

Figure 6 Tutoring request screen

Description: Allows students to enter tutoring details and submit a request.

- Request Submitted Screen

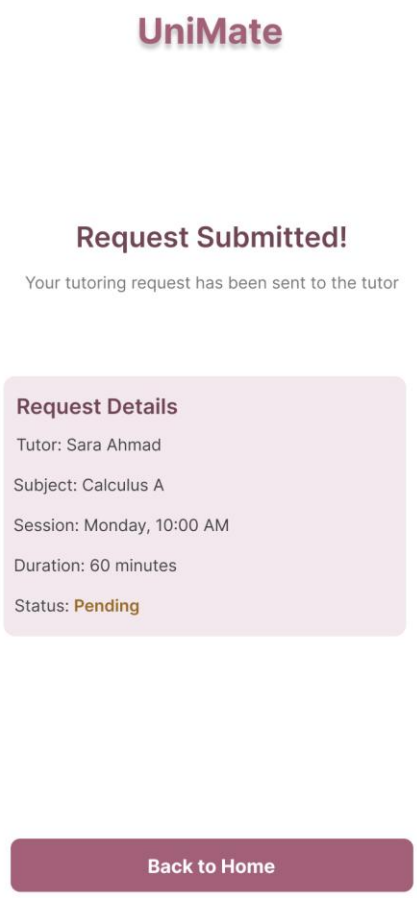

Figure 7 Request Submitted screen

Description: Displays the submitted request details and its Pending status

- Completed Session Screen

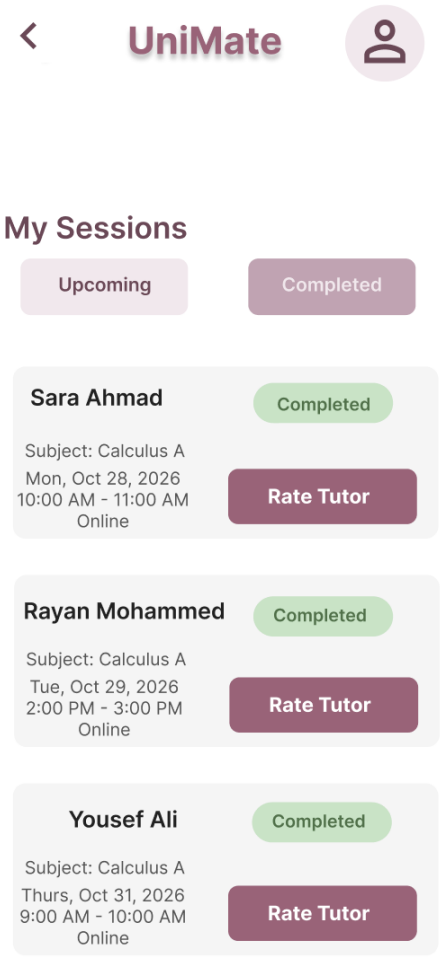

Figure 8 Completed Sessions Screen

Description: Displays the completed sessions and allows the user to choose a session to rate.

- Session Rating Screen

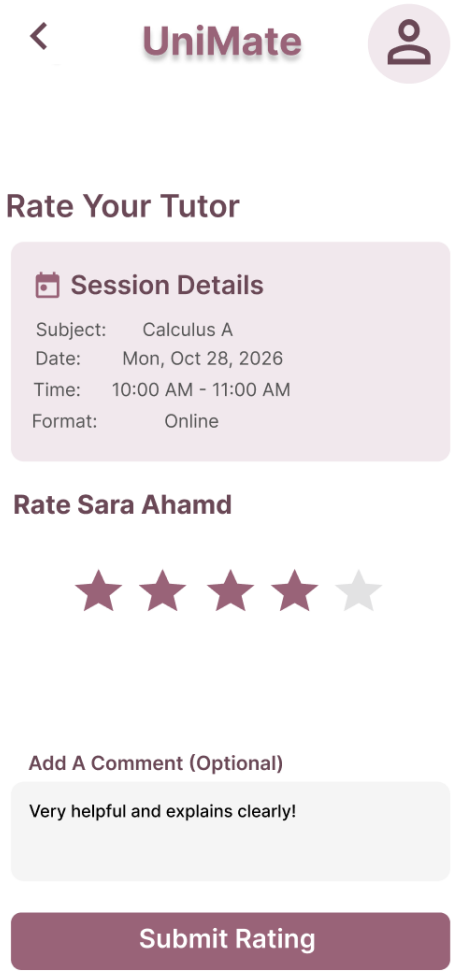

Figure 9 Session Rating Screen

Description: Displays the chosen session and allows the user to rate and add a comment.

- Rating Completed Screen

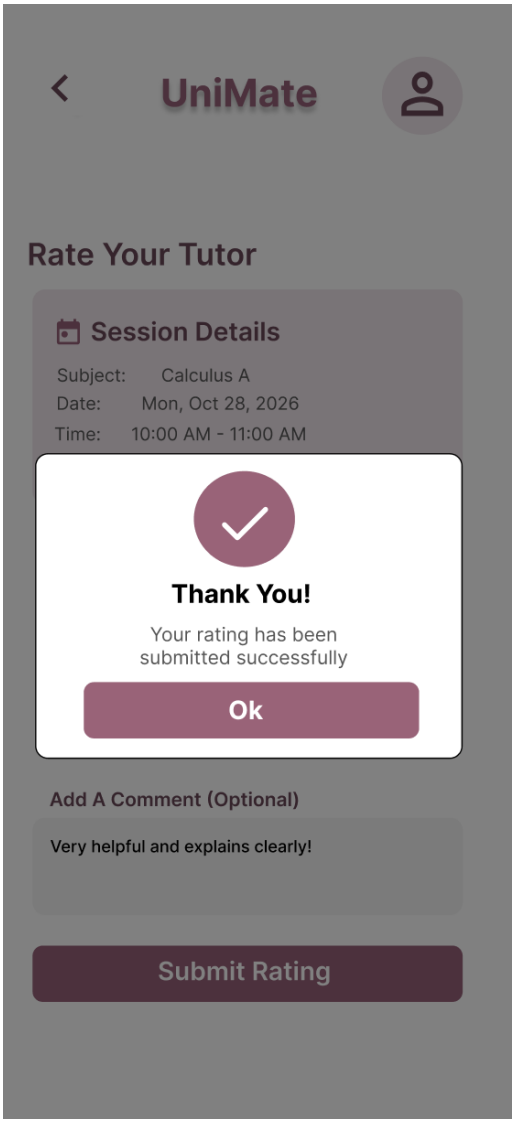

Figure 10 Rating Completed Screen

Description: Displays a thank you message after the rating is complete.

6.3 Planned Usability Evaluation

Scenario ID	Scenario	Planned Participants	Possible Usability Issues	Action / requirement update
UE-01	Student searches for a Calculus A tutor and selects an available tutor.	2 students	Students might have difficulty identifying tutors with suitable available dates and times.	Display the tutor's subject and available session times clearly on the search results screen.
UE-02	Student submits a tutoring request for a selected tutor.	2 students	Students might have difficulty distinguishing selected session information from editable request details.	Use different background colors for selected information and editable fields.
UE-03	Tutor reviews a tutoring request and accepts or declines it.	1 tutor	The tutor might have difficulty understanding the request details before making a decision.	Display the student's request details and provide clearly labeled Accept and Decline buttons.
UE-04	Student checks the status after submitting a tutoring request.	2 students	Students might confuse a pending request with a confirmed tutoring session.	Display a clear Pending status until the tutor accepts the request.

Team Meeting Minutes 1

Team Name:	**UniMate**	**Date:**	**5-10-2026**
Start Time:	**2:00 PM**	**Finish Time:**	**4:00 PM**

Members Present:	Hoor Alameer, Nourah Alaqeel, Ghalya Alzaid
Members Excused:	-
Members Tardy:	-
Members Absent:	-

Summary of meeting

1. Discussed the UniMate SRS document, including functional requirements, non-functional requirements, use cases, and the domain model.
2. Reviewed the Figma UI prototype for student login, tutor searching, tutoring requests, and request submission. Discussed the remaining work, including the tutor request management prototype (UC-02) and usability evaluation.

Task list:

Team Member	Assigned Tasks	Start Date	Due Date
Hoor Alameer	Review project scope, constraints, and Use Case UC-01.	5-10-2026	11-10-2026
Nourah Alaqeel	Review functional requirements and Use Case UC-02 and UC-03	5-10-2026	11-10-2026
Ghalya Alzaid	Complete the UI prototype, prepare screenshots, and update Section 6 of the SRS.	6-10-2026	11-10-26

Next meeting will be held on (12-10-2026)
