College Engineering and Petroleum

371: SOFTWARE ENGINEERING AND DEVELOPMENT

Semester: Fall

Section No. 62A

Assignment: Project Proposal

Student Name: Ghalya Alzaid -Hoor Alameer-Norah Alaqeel

Student Id: 2221127617-2231166091-2221129799

Instructor Name: Dr.Maha Faisal

TA Name: Anwar Al Ebraheem

Academic Integrity and Authorship Declaration

By signing below, I declare that this submission complies with the course's academic integrity requirements. I confirm that I completed the work attributed to me, that I contributed appropriately where the assignment was completed as a group, and that I have a general understanding of the contents of this submission.

Guidelines

- A student may decline to sign this declaration.
- For group work, a team may decline to include one or more members as signatories.
- Any student who does not sign this declaration will receive a grade of zero for the submission.

Project Proposal

1. Project Description

1.1 Project summary

UniMate is a university tutoring system that helps students find suitable tutors and book tutoring sessions based on their needs and availability. The system is used by students, tutors, and coordinators. It solves the problem of students having difficulty finding qualified tutors at suitable times and helps coordinators keep organized records of tutoring requests and approvals.Students can search for available tutors, request a tutoring session, and check the status of their requests. Tutors can accept or decline session requests, while coordinators can manage requests and keep track of approved sessions. The system also supports confirming sessions and keeping records of completed sessions and feedback.The selected extension for UniMate is Mock Notifications and Reminders, which provides notifications and reminders for booking requests, decisions, and upcoming sessions.

1.2 Stakeholders and users

Role	Needs / goals (simple bullets)
Student	• Search for tutors by subject, date and time • Request and book tutoring sessions • Reschedule or cancel sessions
Tutor	• Publish subjects and availability • Receive tutoring requests • Accept or decline requests • Record session completion
Coordinator/Admin	• Verify tutor eligibility • Handel policy exceptions • Monitor system activity

1.3 Scope and Vision

UniMate aims to provide university students with a simple and organized peer-tutoring platform where students can find suitable tutors based on subject, time, and session format. The system will help students and tutors manage tutoring requests and confirmed sessions while following the required project rules.

Goals

- Support the complete tutoring process from searching for a tutor to completing and rating a session.
- Apply the required booking, tutor eligibility, duration, and cancellation rules correctly.
- Allow students and tutors to manage tutoring requests and confirmed sessions.
- Support mock notifications and reminders for booking requests, decisions, and upcoming sessions.

In scope	Out of scope
• Searching for tutors by subject, available time, and session format. • Creating tutoring requests and allowing tutors to accept or decline them. • Managing confirmed sessions, including rescheduling, cancellation, completion, and rating after completion. • Applying the required project rules for tutor verification, booking conflicts, weekly tutoring hour limits, booking notice, session duration, and cancellation timing. • Allowing the Coordinator to verify tutor eligibility and handle policy exceptions. • Supporting Extension F: Mock Notifications and Reminders by showing simulated notifications for requests, decisions, cancellations, and upcoming sessions, including 24 hour and 1 hour reminders. The system will also handle the case where notifications cannot be sent because the user has opted out or the contact information is invalid.	• Login and account creation implementation. • Real payment processing or tutor salary management. • Real SMS, email, or push notification delivery. • Built-in video conferencing. • Integration with university systems. • Features from other extension tracks that are not assigned to the team.

Policy Values

UniMate will use the policy values provided in the project handout. A student may book no more than 5 tutoring hours within any rolling 7 days period without Coordinator approval. A tutoring request must be submitted at least 2 hours before the proposed session start time. A tutoring session must last between 30 and 120 minutes. A cancellation made at least 4 hours before the session start time is considered timely. A tutor cannot be assigned to overlapping confirmed sessions and must be verified for the requested subject before accepting a session.

Risks and Mitigation

One risk is misunderstanding the required project rules, so the team will follow the handout closely and use the same terminology throughout the project. Another risk is adding too many features, so the team will focus only on the required core system and the assigned extension. Uneven team participation will be reduced by dividing tasks clearly and reviewing progress regularly.

2. Appendix : Team Formation

2.1 Team Leader Selection Process

We selected the Team Leader using a weighted decision matrix to ensure the choice is transparent, repeatable, and aligned with modern software project leadership expectations: predictable delivery, a clear collaboration framework, proactive risk management, strong stakeholder communication, and team enablement.

2.1.1 Selection Steps

- Agree on criteria and weights (1-10): The team defines what matters most for this project and assigns a weight to each criterion (10 = most critical).
- Independent scoring (1-5): Each team member scores each candidate on each criterion using the same anchors: 1 = weak/rarely demonstrated, 3 = acceptable/consistent with prompting, 5 = excellent/consistently demonstrated.
- Average to reduce bias: For each criterion, a candidate's score is the average of all team members' scores.
- Compute weighted totals: Weighted Score = Weight x Average Score; Total Score = Σ (Weight x Average Score).
- Select leader and document result: The candidate with the highest total score is selected as Team Leader.
- Tie-break rule: If totals are within 3%, prioritize higher scores in Planning & Delivery Execution, Stakeholder Management & Status Communications, and Risk Management & Issue Ownership; then confirm availability and commitment in a short discussion.

Integrity gate (pass/fail): Any serious ethics or academic integrity concern disqualifies a candidate (this is not scored as points).

2.1.2 Leader Selection Criteria

Scoring: 1-5 per criterion (1 = weak, 3 = acceptable, 5 = excellent). Weights: 1-10 (10 = most important).

Notes

- Stakeholder management includes identifying stakeholders, running a kickoff, and maintaining a predictable update/demo cadence.
- Collaboration system/documentation hub means one place for the plan/board/docs and clear team channels so information is discoverable.
- Risk management includes surfacing risks early, tracking them, and driving mitigations (including integration failures and critical defects).
- Technical leadership & integration includes integration planning, and code review discipline.

Criterion	Weight (Max10)	Hoor	Ghalya	Noura
1) Planning & delivery execution	10	5	4	4
2) Accountability & follow-through	9	5	5	5
3) Stakeholder management & status communications	9	4	4	4
4) Collaboration system & documentation hub	8	4	4	5
5) Risk management & issue ownership	8	4	4	3
6) Prioritization & scope control	8	5	3	4
7) Requirements clarity (testable outcomes)	7	5	5	5
8) Quality & testing discipline (evidence)	7	4	4	4
9) Technical leadership & integration	6	4	4	4
10) Team culture: feedback, mentoring, motivation	6	3	4	4
Total (Σ Weight x Avg Score)		4.36	4.1	4.21

Decision:

Based on the weighted decision, Hoor was selected as the team leader because she received the highest total score of 340. Ghalya and Noura also received high overall scores showing that all team members have strong skills.

2.2 Team Agreement

Team Working Agreement

Course Project Collaboration Rules

Fill in the fields below, then keep this document in your repository.

Team Name	Group D	Project Title	UniMate
Course / Section	Software Eng / 62A	Date	5-10-2026
Team Leader	Hoor	Repo URL	https://github.com/hooralameerr/UniMate.git
Primary Tools	[GitHub, Notion, Teams/WhatsApp...]	Issue Board	[Link]

1. Purpose

This working agreement defines how the team collaborates, communicates, and delivers course artifacts.
It is a commitment by all members to reduce confusion, avoid missed deadlines, and maintain fairness.

- We will follow this agreement unless the whole team agrees to update it (record updates in the repo).

2. Communication

Tip: write what "urgent" means for your team.

- Primary channel: [Teams/WhatsApp/Slack]. Backup channel: [Email].
- Response time: within [12/24] hours on weekdays; weekends within [24/48] hours unless stated otherwise.
- Urgent issues (blocking a deadline): tag/call the Team Leader and post in the channel with "URGENT".
- All key decisions must be written down (issue comment / meeting notes) for traceability.

3. Meetings

- Frequency: [e.g., 2 per week]. Duration: [e.g., 45 minutes].
- Agenda: posted by [Leader/Rotating] at least [12] hours before.
- Attendance: expected unless excused in advance; repeated no-shows trigger escalation (Section 8).
- Minutes: captured in [Google Doc/Markdown in repo] with action items, owner, and due date.

4. Task Management and Ownership

- All work is tracked on the issue board (no "invisible work").
- Each task has: owner, due date, clear deliverable, and acceptance criteria (what "done" means).
- Work is broken into small tasks (<= 1–2 days each) where possible.
- The leader checks progress at least [twice] per week and helps unblock issues quickly.

Definition of Done (DoD)

A task is "done" only when it satisfies the checklist below (adjust for your project):

DoD Item	Notes / Evidence
Code implemented / artifact produced	[Link/commit]
Peer review completed (if applicable)	[Reviewer + date]
Tests written/executed and passing	[CI link / screenshot]
Meets requirements / acceptance criteria	[Req ID]
Documentation updated (if needed)	[File/section]

5. Quality Standards

- Version control: all work is committed to the repo; meaningful commit messages are required.
- Branching: [feature branches / main protected]. No direct commits to main unless agreed.
- Reviews: at least [1] reviewer for every merge (unless emergency).
- Testing: minimum expectation is [unit tests / integration tests] for core functionality.
- Documentation: artifacts must follow the official course templates and include required evidence links.

6. Deadlines and Availability

- We set an internal deadline at least [24/48] hours before any official submission deadline.
- If you will miss a deadline, you must notify the team at least [24] hours in advance with a recovery plan.
- If a member is blocked for more than [24] hours, they must raise it immediately (don't wait).

7. Decision-Making

- Default approach: discuss -> propose options -> decide within a time box of [24/48] hours.
- Decision rule: [consensus / majority vote / leader decides after discussion].
- Architectural or scope decisions require written rationale in [ADR/issue] with pros/cons.

8. Conflict Resolution and Escalation

- Step 1: address the issue directly and respectfully with the person involved (1:1).
- Step 2: bring it to the next team meeting for a structured discussion.
- Step 3: team leader mediates and proposes an action plan with measurable expectations.
- Step 4: if unresolved or repeated, escalate to instructor/TA with documented evidence.

9. Workload Fairness

- Expected contribution: each member spends approximately [X] hours/week (agree the number).
- Tasks are assigned based on capacity and learning goals; everyone must contribute to core deliverables.
- Persistent non-participation: after [2] missed commitments, tasks are reassigned and escalation begins.

10. Tools and Documentation Locations

- Repository: [URL]. https://github.com/hooralameerr/UniMate.git
- Issue board: [URL]. Labels/statuses: [To Do / Doing / Review / Done].
- Meeting notes: [location].
- Document templates / final PDFs: [folder path].
- Testing evidence: [location/link].

Ethics and Academic Integrity

All team members must follow course rules on academic integrity. Plagiarism, falsified test evidence, or misrepresentation of work is unacceptable and may lead to disqualification or disciplinary action. Cite any external sources and clearly attribute AI-assisted content where required.

Sign-off

By signing below, we agree to follow this working agreement for the duration of the project.

Name	Signature	Date
